Employment History

Game Programmer

01/2015 – 01/2016 Kiz Studios, Inc (now You42, Inc), Cumming GA

- Responsible for engineering solutions for video game projects using the Unity3D platform.
- Responsible for developing network based, multi-tiered solutions for games employing persistent data paradigms.
- Responsible for developing analytical and reporting solutions for game apps in a multi-tiered environment.
- Mobile game app development with C# using Unity3D editor and Visual Studios.
- Middle tier development with PHP.
- Backend development with MS SQL Server.

Director of Technology

07/2008 – 01/2015 Kiz Studios, Inc (now You42, Inc), Cumming GA

- Responsible for developing patented technology systems.
- Responsible for planning, developing, and maintaining all company websites, web applications, and network infrastructure.
- Responsible for coordinating with technology partners on analysis and development of new technology.
- Frontend web development with HTML, XML, CSS and JavaScript, jQuery, AJAX
- Middle tier web development with ASP/C#.NET (MVC), PHP, and ColdFusion.
- Backend database developer with MS SQL Server and MySQL.
- Mobile App development with Java (Android) and Objective-C (iOS).
- Desktop application development with Visual Basic.
- Minor API development with C++.

Contractor

02/2006 – 07/2008 United Parcel Service of America, Inc., Atlanta GA

- I was responsible for development of reporting and transactional applications within the Business and Information Analysis (BIA) intranet.

- This included application development in ColdFusion as well as database design in MS SQL Server.
- Heavy emphasis was placed on query analysis, indexing, and overall performance.
- Applications required DTS packages to migrate data from multiple locations into a central repository. Some work with SSIS was done.
- Frontend web development with HTML, XML, CSS and JavaScript, jQuery, AJAX
- Middle tier web development with ColdFusion.
- Backend database developer with MS SQL Server.

Systems Engineer

10/2001 – 02/2006 DIAWS Systems, Inc., Alpharetta, GA

- I was responsible for full life cycle development on enterprise level databases and web applications. This included business analysis to determine requirements and specifications for databases and web applications as well as full development and testing up to final release of client projects. I was responsible in part for time estimates as well as any technical documentation necessary for projects. I was responsible for assisting team members in their roles as well.
- All technical documentation was developed using MS Office 2000 and MS Visio 2000.
- Database development was done in MS SQL Server 7.0 - MS SQL Server 2000. SQL, Transact-SQL, and stored procedures were the primary methods used to access and manage data.
- Web applications were coded in ColdFusion 4.0 – MX 6.1 using Fusebox 3.0 methodology. Custom tags, User-Defined Functions, and COM objects were used as needed.
- E-Commerce integration with Authorize.net, Verisign, and Linkpoint for payment transaction processing.
- Desktop application development with Visual Basic and Java.

Education

11/2000 Computer Learning Center, Marietta, GA
- Vocational
